Identification of Wastewater Treatment and Disposal Options for Operable Unit No. 7
Seep Water

Laurie Peterson-Wright, OU-7 Project Manager
Environmental Restoration Project
EG&G Rocky Flats, Inc.

The Department of Energy (DOE) received approval of the Operable Unit (OU) 7 Seep Collection Proposed Action Memorandum (PAM) via letter from the State of Colorado dated December 8, 1994 (attached).

As described in this approval letter, "...provisions for the treatment of the seep water described in Section 3.1 must be resolved and proposed to the agencies within the timeframes outlined in Table 5-1." Practically, this means that EG&G and DOE must present a concrete proposal for seep water treatment and disposal to the regulatory agencies for approval before proceeding with procurement and construction of the seep water collection system.

From discussions with M. Burmeister and T. Vess coupled with review of the schedule for the Sitewide Water Treatment Facility (attached), it is apparent that the sitewide facility treatment concept will not support the OU 7 seep collection project treatment and disposal needs within the timeframes described by the PAM. Therefore, the proposed sitewide water treatment facility or OU 1 or 2 treatment facilities will not be relied upon for seep water treatment.

Please redirect your efforts from coordination with the OU 1, OU 2, or proposed site-wide treatment facilities, and focus instead on securing written acceptance for treatment of OU 7 seep water from other existing on-site facilities. If you cannot secure written, on-site acceptance by January 20, 1995, then please proceed to include seep water treatment requirements in the request for proposal (RFP).

In any case, to avoid the possibility of constructing a collection system without the attendant treatment capacity in place, a seep collection system RFP must not be released without prior written approval from DOE.
